

**ABSTRACT OF THE DISCLOSURE**

A vehicle towing attachment is to be inserted into a lower portion of a vehicle to be towed and raises and holds wheels 5 when the vehicle to be towed is towed. The attachment has three prongs for retaining a plate spring having the wheel attached thereon. Since the three prongs are provided on the attachment, shifting of the towed vehicle in the transverse direction and the front and rear direction can be prevented without fail. Even 10 during the course of towing operation, the towed vehicle can be retained stably and reliably.
